UNITED STATES FOREIGN TRADE

SUMMARY REPORT FT 930-E **JANUARY 1960**

FOR RELEASE March 14, 1960

EXPORT TRADE BY COMMODITY

The Bureau of the Census, Department of Commerce, announced today that the decrease in United States exports of domestic merchandise from \$1,658.8 million in December 1959 to \$1,543.7 million in January 1960, a decline of about 13 percent, reflected decreases in exports of all of the economic classes of commodities. The Bureau stated, however, that the January 1960 domestic merchandise export total was about 12 percent more than the January 1959 total of \$1,384.5 million. These totals include data on exports of M.S.P. (military) shipments.

With M.S.P. (military) shipments excluded, January 1910 exports of domestic merchandise were valued at \$1,466.0 million, a level about six percent less than the December 1959 total of \$1,553.6 million but about 15 percent more than the January 1959 total of \$1,270.0 million.

Exports of <u>finished manufactures</u>, which accounted for the bulk of the drop in exports of domestic merchandise from December 1959 to January 1960, fell from \$935.0 to \$855.8 million. This decrease was due chiefly to declines in exports of individual commodities included in this economic class as follows: aircraft, parts and accessories, from \$44.5 to \$63.5 million; ammunition, components and parts, from \$28.2 to \$12.3 million; textile, sewing and shoe machinery, from \$14.7 to \$10.3 million; paper and manufactures, from \$24.0 to \$19.9 million; radio and television apparatus, from \$21.9 to \$17.9 million; and motor fuel and gasoline, including jet fuels, from \$8.3 to \$4.7 million. However, increases were reported in

exports of passenger cars, from \$15.9 to \$24.5 million and tractors, from \$14.4 to \$21.2 million. Exports of <u>semimanufactures</u> fell from \$260.0 to \$239.8 million as small decreases were reported in exports of many of the individual items included in this economic class. The more noticeable of these were rayon, nylon and other man-made textile semimanufactures, from \$16.7 to \$10.6 million, and plastics and resin materials from \$26.3 to \$23.0 million.

Exports of manufactured foodstuffs dropped from \$92.3 to \$82.9 million owing chiefly to declines in exports of manufactured foodstuffs exported for relief or charity, from \$8.4 to \$4.4 million, and wheat flour, from \$13.2 to \$9.9 million. However, exports of milled rice, also included in this economic class, rose from \$5.9 to \$10.2 million. Exports of crude foodstuffs fell from \$126.2 to \$122.4 million as a sizable drop in exports of corn from \$32.7 to \$17.8 million was largely offset by an increase in exports of wheat, from \$44.9 to \$57.0 million.

Although the decline in exports of crude materials from \$245.3 million in December 1959 to \$242.7 million in January 1960 was slight, noticeable counterbalancing changes were reported in exports of the leading commodities included in this economic class. Decreases were noted in exports of unmanufactured tobacco, from \$43.0 to \$16.9 million; oilseeds, from \$42.4 to \$24.0 million; and coal, from \$29.1 to \$21.1 million while exports of unmanufactured cotton increased noticeably from \$89.1 to \$137.5 million.

EXPLANATION OF STATISTICS

COVERAGE: Export statistics include government as well as non-government shipments to foreign countries. The export statistics, therefore, include Mutual Security Program military aid, Mutual Security Program economic aid and Department of the Army Civilian Supply shipments. Separate figures for Mutual Security Program military aid are shown in the footnotes of this report. Shipments to United States armed forces and diplomatic missions abroad for their own use are excluded from export statistics. United States trade with Puerto Rico and United States possessions is not included in this report, but export trade of Puerto Rico with foreign countries is included as a part of the United States export trade. Merchandise shipped in transit through the United States between foreign countries is not included in exports.

VALUATION: The valuation definition used in the export statistics is the value at the seaport, border point, or airport of exportation. It is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port of exportation. Transportation and other costs beyond the United States port of exportation are excluded. However, in some instances the valuation may not be reported in accordance with this definition, particularly where the export value is difficult to determine or must be estimated.

None of the values have been adjusted for changes in price level.

EFFECT OF SAMPLING: The value of export shipments individually valued at \$100-\$499 (about five percent of total export value) is estimated by sampling. Effective with the statistics for January 1960, the previous sample ratio of 10 percent has been increased to a 50 percent sample for countries other than Canada with the 10 percent sample being retained for Canada. The estimated values are distributed among the individual commodity totals. For the 1960 export figures in this report, the probable variability due to sampling is less than \$50,000 or less than a trivial percentage which can be ignored. For periods prior to 1960, the probable variability due to sampling is less than \$50,000 or less than two percent of the individual totals shown. The largest variation from rounding of figures is \$50,000. For further information regarding sampling procedures, see the September 1953, February 1954, January and June 1956, and the October-December 1959 issues of Foreign Trade Statistics Notes.

Further information regarding coverage, valuation, etc., is contained in the "General Explanation" in foreword of Report No. FT 410. For complete statement, see foreword in Foreign Commerce and Navigation of the United States.

Prepared in the Bureau of the Census, Foreign Trade Division
